Troubleshooting tomo

Matthieu Debailleul, *Laboratoire IRIMAS*

1 Introduction

Problem	Finding	Solution
spectrum is square	a beam is not colimated	Collimate beam
spectrum is too small	non plane beam/bad kohler illumination	Collimate beam/fix Kohler illumination
spectre appears duplicated	staurated Caméra	decrease exposure with "Q"
GUI crashed at start	missing keyword	launch `tomo_gui` in a console, then add the missing keyword in the right config file
disymetric spectrum/OTF	bad scanning : voltage or optical tweaking	adjust voltages or optical set up
noisy reconstruction	not enough signal	adjust polarisations (contrast or intensity with `show_fourier`), scanning, illumination
